BIOLOGICAL SERIES — CUMULATIVE INDEX

JUNE 1977/ISSN 0068-1024

PREFACE

This cumulative index is by author and subject, and covers the material in the Science Bulletin from its inception with vol. 1, 1955 to its demise with vol. 20, 1976. Now materials that were normally published in the Science Bulletin, are published in the Great Basin Naturalist or its Memoirs.

The index has been produced with the aid of the IBM 360 computer. Therefore, all entries are in capital letters. This includes genera and species in the "subject and scientific name index." A generic name is always in the primary position and the species and subspecies are indented beneath it as follows:

CROTAPHYTUS
  COLLARIS
  **FUSCUS 13(2): 23-24

In the above example fuscus is indicated as a new subspecies by the use of the double asterisk. A single asterisk is used to indicate a new genus or species as follows:

*BECKOCORIS
  *LATICEPHALUS 9(3): 36-37

In the above example 9 is the volume, (3) is issue number three, pages 36-37.

We wish to express our thanks to the School of Library and Information Sciences and the College of Biological and Agricultural Sciences at Brigham Young University for providing interns and secretarial help. To interns Holly Adams, Marianne Boisvert, Christie Isom, and Janice Jones, we express our appreciation. Thanks also are expressed to Vi VanAusdal, secretary; Ravona Pike, data entry operator; and Ralph Egan, computer programmer; whose help was greatly appreciated.

Nathan M. Smith, Ph.D.
Associate Professor, Library
and Information Sciences
